Dear DID-partner

I proudly present you our new product line. Last year we have made some great changes to our designs. Especially the 15-17 inch digital reception has gone through a nice redesign. By using sharp lines and a clear contrast, the new design really stands out.

Also, we have changed the mounting of the standard digital receptions. The front plate can be completely removed from the backplate allowing for convenient display installation. This reduces installation time up to 60%.

We thank you for the pleasant cooperation and your trust in Dekker Industrial Design.

Best regards,
Thijs Dekker
